, a readminidump with all the information we needed. This dump will help us to get the Windows version number for both Windows XP and Windows Server 2003. The Windows version information is available through the WMI interface. Now it's time to use the Windows performance counters available in the WMI interface to monitor the processor's cycles and its processor load. Finally, here is the raw XML output from WMI. I have only given the information we are interested in. So the first line is the Windows XP version number. As this is the only line we will need, we can ignore the rest.

Lena Paulus Lena Paulus (born 9 December 1984) is a German slalom canoeist who has competed at the international level since 2000. She won a silver medal in the K1 team event at the 2002 ICF Canoe Slalom World Championships in Bourg St.-Maurice. She also won three gold medals in the same event at the European Championships. Paulus retired from international competition in 2019.

Effect of surgical resection on local accumulation of CD5-positive malignant lymphocytes in patients with malignant lymphoma. Patients with malignant lymphoma often have a localized tumor that can be resected with curative intent. The aim of this study was to investigate whether surgical resection affects local accumulation of malignant lymphocytes in these patients. A detailed histopathological analysis was performed in 16 patients with malignant lymphoma who had a partial or near-total resection of the tumor before or after local treatment. In all cases, the resected tumor was analyzed for the presence of CD5-positive malignant lymphocytes. Tumor infiltration of CD5-positive lymphocytes was observed in 14 patients. In seven of these patients, CD5-positive lymphocytes were detected only in the residual tumor. A higher proportion of CD5-positive lymphocytes was observed in samples from patients who had residual tumors ( $p=0.01$ ). Local accumulation
